Application

The switch position indicators **IPI/IPIR 24/25/29/36/39** are used for operation in mimic circuit diagrams of switch gears as well control panels, switchboards and mosaic technology to indicate the switching state in electrical installations.

The switch position indicators provide screw terminals for cable cross-section up to 1.5 mm².

Functional Principle

The switch position indicators are equipped with a rotary magnet system guaranteeing an accurate position of index symbols. Thermal development in the indicator is negligible due to the low power consumption.

The coil of the system generates a magnetic field. The rotary magnet is axially linked to the index symbol. The position of it is determined by the pole shoes. An external resetting is not necessary.

Electrical Data

switch position indicators are available for use on DC or AC voltage ranging from 24 V to 230 V (see connection diagrams).

type: IPI	for use on DC voltage
type: IPIR	for use on AC voltage
power consumption	0.4 W based on 110 V 1.4 W based on 230 V
dielectric test	3.7 kV
frequency range (AC operation)	40 Hz ... 10 kHz
voltage variation permissible	±20%
measurement category	CAT III
operating voltage	300 V

Rules and Standards

DIN EN 61010-1	Safety requirements for electrical equipment for measurement, control, and laboratory use Part 1: General requirements
DIN EN 60051-1	Direct acting indicating analogue electrical measuring instruments and their accessories Part 1: Definitions and general requirements common to all parts
DIN EN 61000-6-2	Electromagnetic compatibility (EMC) – Part 6-2: Generic standards – Immunity for industrial environments
DIN EN 61000-6-3	Electromagnetic compatibility (EMC) – Part 6-3: Generic standards – Emission standard for residential, commercial and light-industrial environments

Indication

There are three positions of indication:

"ON"

out of operation:
"DISTURBED"
or "BLOCKED"

"OFF"
