For rapid testing of leakage currents and isolation faults on live installations!

Analysis of RCD trigger currents

Earth leakage currents

Unbalanced phase currents

High immunity to currents of adjacent conductors

Anti-harmonic filter selection for enhanced fault detection on disturbed systems

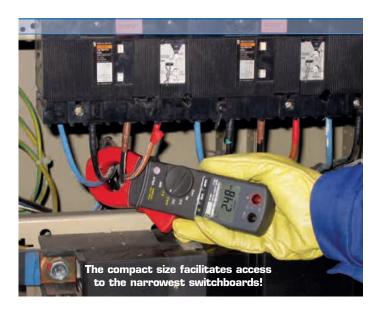

3-year warranty

Measurements compatible with the VDE 0404-4, VDE 0413-13 and IEC 61557-13 standards

# Rapid testing for leakage currents...

Your installation and its users may be endangered through isolation faults and untimely RCD tripping. Such phenomena are often caused by leakage currents that prove difficult to detect.

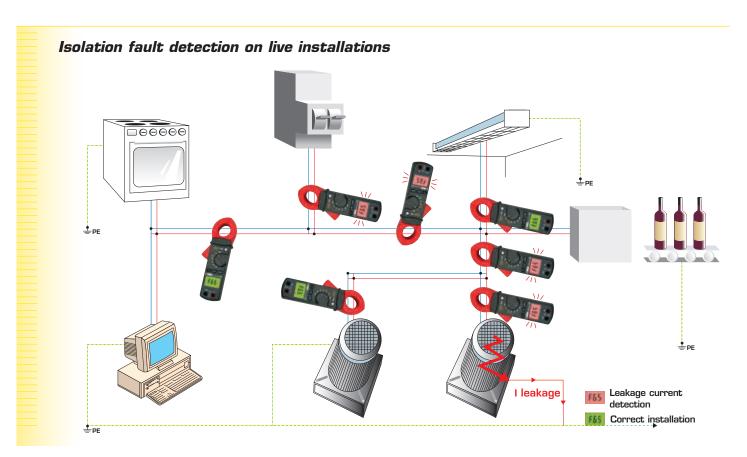

For testing and maintenance professionals in the industrial and tertiary sectors faced with this challenge, **F65** pocket-sized clamps are the recognized solution, while providing the full range of functions proposed by conventional clamp multimeters.

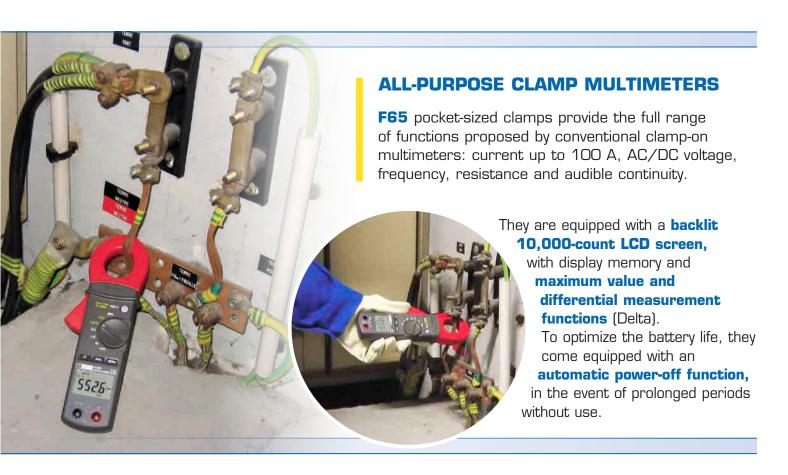

## DETECTION OF LEAKAGE CURRENTS AND ISOLATION FAULTS

Offering exceptional resolution of 10  $\mu A$  and high immunity (70 dB) to eddy currents, the **F65** clamp is specially suited to the measurement of leakage currents that trigger RCDs, causing imbalances between phase-phase and phase-earth currents.

The harmonic filter facilitates the detection of faults on disturbed systems and power circuits (switched power supplies, variable speed drives, inverters, etc.).

# and detection of isolation faults on live installations!

# Other Chauvin Arnoux products for use in association with the F65 clamp

#### Clamp jaws open to 115 mm!

**The B102 clamp**, associated with a multimeter, is the ideal accessory for use with F65 clamps to test installation feeders on large-diameter conductors.

### Complete verification of the safety of your electrical installations

In domestic, tertiary or industrial environments (TT, TN or IT systems), **the C.A 6116N electrical installation tester** offers a wide range of measurements for checking and certifying electrical installations' safety and compliance with the standards.
